# MY MP1 PROJECT

By: Beatriz L. Pinao-an

Instructor: Victor Santos

BACKGROUND OF THE PROJECT

As a student of kodegeek, I decided to create a website of our small construction company, a private family business situated in the province of Nueva Vizcaya named "Acscribe Contruction". This company sells a service limited to general construction, commercial construction and residential construction. The company has no online identity where potential clients will go over when they need to look in, if the company has the capability to build the clients preferences or compete with the other companies without going to the company office and project sites especially if the client is from other areas far from the province of Nueva vizcaya. After MP1, I'm also looking to work with other systems that we need in the company for MP2 till capstone like our payroll system, materials and equipment inventory system and project operations monitoring system.

Project Title:

ACSCRIBE CONSTRUCTION WEB SITE

Problem:

1. The company can not showcase its good works or quality works to potential clients and it can not show separation from its competiton.
2. Leads to grow and generate business is very low.
3. Difficult to stablish trust to potential clients.
4. No online identity

Solution to the Problem:

Create the following pages of the website:
1. **Home Page**
2. **About Us**
3. **Services**
4. **Projects**
5. **Contact Us**
6. **Clients Comments regarding company services.**
7. **Navigation for Online Qoutation and Enquiry**

Description of the project:

1. **This project will create a simple but quality, streamlined, organized and easy to navigate construction website that the company customers can't wait to interact where in this website, the company can showcase what they have to attract customers.**
2. **The website also will have an enquiry option to enquire for quotation and to schedule a meeting or to visit the office.**
3. **The title is "ACSCRIBE CONSTRUCTION WEBPAGE"**

Featrures and limitations:

This project is a responsive web page and it limits only to the company description, services, projects, client's comments and company contact information.

Theme: Something like orange

Fonts: Arial

Logo: Company logo

Technology: HTML, CSS,JS, figma, etc.
